

APPENDIX 2: FLORA SPECIES LIST

The Rockview Conservation Area supports a high diversity of plants with a total of 457 species recorded during the ground survey including 39 introduced (shown by *) and 418 native plants. The following list cannot be considered complete due to the seasonality of surveys, in particular, cryptic plants such as orchids, which are only visible above ground for short periods, may be located during targeted seasonal surveys.

Two threatened plants were recorded from the property currently listed on the *Threatened Species Conservation Act 1995*. **These are shown in bold.**
